Chapter 8 Ap Statistics Test Chapter 8 AP Statistics Test Inference for Proportions This article will guide you through the key concepts of Chapter 8 in your AP Statistics course focusing on inference for proportions We'll break down the concepts highlight important formulas and provide examples to solidify your understanding

I to Inference for Proportions In the world of statistics we often want to draw conclusions about a population based on data collected from a sample When dealing with categorical data like yes or no male or female etc we use proportions to represent the percentage of individuals within a group who possess a certain characteristic Inference for proportions allows us to use sample data to estimate the population proportion denoted by p and test hypotheses about its value

II Conditions for Inference Before we dive into the methods for inference we need to ensure our data meets certain conditions

- Random Sample** The data should be collected from a random sample of the population This ensures the sample is representative and avoids bias
- Large Sample Size** The sample size should be large enough to ensure the sampling distribution of the sample proportion denoted by \hat{p} is approximately normal The rule of thumb is that both np and $n(1-p)$ should be greater than or equal to 10
- Independence** The individuals in the sample should be independent of each other This means the outcome for one individual doesn't influence the outcome for another

III Confidence Intervals for Proportions A confidence interval for a proportion provides a range of plausible values for the true population proportion The formula for a confidence interval is $\hat{p} \pm z^* \sqrt{\frac{\hat{p}(1-\hat{p})}{n}}$ Where \hat{p} is the sample proportion z^* is the critical value from the standard normal distribution corresponding to the desired confidence level n is the sample size

Example A researcher wants to estimate the proportion of adults in the US who have a college degree They survey a random sample of 1000 adults and find that 320 have a college degree Calculate a 95% confidence interval for the true population proportion

$\hat{p} = \frac{320}{1000} = 0.32$ z^* for a 95% confidence level is 1.96 found using a z-table or calculator $n = 1000$ The 95% confidence interval is $0.32 \pm 1.96 \sqrt{\frac{0.32(1-0.32)}{1000}}$ 0.32 ± 0.029 Therefore we are 95% confident that the true proportion of US adults with a college degree is between 0.291 and 0.349

IV Hypothesis Testing for Proportions Hypothesis testing involves comparing the observed sample proportion to a hypothesized value for the population proportion We use a test statistic to determine whether the observed difference between the sample and hypothesized proportion is statistically significant The formula for the test statistic for proportions is $z = \frac{\hat{p} - p_0}{\sqrt{\frac{p_0(1-p_0)}{n}}}$ Where \hat{p} is the sample proportion p_0 is the hypothesized population proportion n is the sample size

Steps for Hypothesis Testing

- State the null and alternative hypotheses The null hypothesis H_0 represents the status quo while the alternative hypothesis H_a represents the claim we want to test
- Check conditions Ensure the conditions for inference random sample large sample size and independence are met
- Calculate the test statistic Use the formula above to calculate the z-statistic
- Find the p-value The p-value represents the probability of observing a sample proportion as extreme as the one we obtained assuming the null hypothesis is true
- Make a decision Compare the p-value to the significance level and reject or fail to reject the null hypothesis

Example A company claims that 70% of their customers are satisfied with their product A consumer advocacy group wants to test this claim They survey a random sample of 200 customers and find that 120 are satisfied $H_0: p = 0.7$ $H_a: p \neq 0.7$ $z = \frac{0.6 - 0.7}{\sqrt{\frac{0.7(1-0.7)}{200}}} = -2.13$ The p-value for a two-tailed test with a z-statistic of 2.13 is approximately 0.033 Since the p-value 0.033 is less than the significance level 0.05 we reject the null hypothesis There is sufficient evidence to suggest that the proportion of satisfied customers

is different from 70 V OneSided vs TwoSided Tests TwoSided Tests These test whether the population proportion is different from a specified value The alternative hypothesis is $p \neq p_0$ OneSided Tests These test whether the population proportion is either greater than or less than a specified value The alternative hypothesis is either $p > p_0$ or $p < p_0$ VI Type I and Type II Errors In hypothesis testing there is always the possibility of making an error Type I Error Rejecting the null hypothesis when it is actually true false positive Type II Error Failing to reject the null hypothesis when it is false false negative The choice of significance level determines the probability of making a Type I error VII Power of the Test The power of a test is the probability of correctly rejecting the null hypothesis when it is false A more powerful test is better at detecting a true difference in the population proportion VIII Conclusion Inference for proportions allows us to analyze categorical data and draw conclusions about the population based on sample information By understanding the concepts and methods discussed in this chapter you will be well-equipped to tackle problems involving proportions 4 in your AP Statistics course and beyond Remember to practice with various examples and exercises to solidify your understanding and build confidence in applying these concepts

Chapter 1: Succeeding in AP Statistics

The objective of this book is to prepare you for the advanced placement examination in statistics by providing you with an accurate representation of the test. Toward that end, we provide an extensive review and practice tests that cover the material one would expect to study in a typical advanced placement course and see on the exam itself. Six full-length practice statistics exams are provided. Following each practice exam is an answer key and a detailed explanation for every question. The explanations not only provide the correct response but also explain why none of the remaining answers is the best choice. By studying the appropriate review sections, taking the corresponding exams, and studying the answer explanations, you can discover your strengths and weaknesses and prepare yourself to score well on the AP Statistics examination.

About the Advanced Placement Program

The advanced placement program consists of two components: an AP course and an AP exam. Advanced placement examinations are offered each May at participating schools and multischool centers throughout the world. The advanced placement program is designed to provide high school students with the opportunity to pursue college-level studies while still attending high school. In turn, the participating colleges grant credit and/or advanced placement to students who do well on the examination.

The AP Statistics course is designed to represent the content of a typical introductory college course in statistics. The full-year course covers the skills and knowledge expected of students in the field of introductory statistics. The course is intended for high school students who wish to complete studies equivalent to a one-semester, non-calculus-based college course in statistics.

Additional information about the AP program and the AP Statistics exam is available by contacting AP Services, Educational Testing Service, P.O. Box 6671, Princeton, NJ 08541-6671. Phone: 609-771-7300. Fax: 609-530-0482. E-mail: apexams@ets.org. Website: collegeboard.com.

The AP Statistics exam

The AP Statistics exam lasts 180 minutes and is divided into two sections:

- i. Multiple choice: 50 of your grade. This 90-minute section is composed of 35 questions designed to test your proficiency in a wide variety of topics. The questions test examinees' ability to explore data, plan a statistical study, anticipate patterns, and make statistical inferences.
- ii. Free response: a combined 50 of your grade. This 90-minute section requires the student to answer four to seven open-ended questions and to complete one investigative task question involving more extended reasoning. Each open-ended question has been created to be answered in approximately 10 minutes; the longer investigative task question has been created to be answered in approximately 30 minutes. The questions require students to relate different content areas as they plan an extensive solution to a statistics or probability problem. Students are expected to use their analytical and organizational skills to formulate cogent answers. In writing their responses, it will be expected that students will show enough of their work to allow the readers to be able to follow their logic. Note that it is not necessary to write out routine statistical calculations that can be done on a calculator. Each student is expected to bring a calculator with statistical capabilities to the examination. The computational capabilities of the calculator should include common univariate and bivariate summaries through linear regression. The graphical capabilities of the calculator should include common univariate and bivariate displays such as boxplots, histograms, and scatterplots. Most graphing calculators on the market are acceptable. Non-graphing calculators are allowed only if they have the computational capabilities described previously.

The following, however, are not permitted: powerbooks and portable computers, pocket organizers, electronic writing pads, pen input devices, or devices with typewriter-style or QWERTY keyboards.

About the Review Sections

As mentioned earlier, this book has a review chapter for each of the four topics covered on the exam. The following are the four review chapters in this book that cover the topics on the AP Statistics exam: exploring data, planning a study, anticipating patterns, statistical inferences. The review chapters provide a thorough discussion of the material tested on the exam by studying the review

chapters and by taking the practice tests you can prepare yourself to score high on the ap statistics exam scoring the exam the multiple choice section of the exam is scored by crediting each correct answer with one point and deducting one fourth of a point for each incorrect answer unanswered questions receive neither credit nor deduction the free response questions are graded by readers chosen from around the country for their familiarity with the ap program each free response question is read and scored with the reader providing the score on a 0 to 4 0 being the lowest and 4 the highest scale the free response questions are scored based on the statistical knowledge and communication the student used to answer the question the statistical knowledge criteria include identifying the important concepts of the problem and demonstrating statistical concepts and techniques that result in a correct solution of the problem the communication criteria include an explanation of what was done and why along with a statement of conclusions drawn once the free response questions have been graded by all of the readers the scores are converted the open ended questions count as 75 of the free response score the investigative task question counts as 25 scoring the multiple choice section for the multiple choice section use this formula to calculate your raw score number right number wrong $\times 1.4$ raw score round to the nearest whole number note do not include unanswered questions in the formula scoring the free response questions for the free response section use this formula to calculate your raw score 5 open ended questions 75 1 investigative task question 25 raw score the composite score to obtain your composite score use the following method multiple choice raw score free response raw score raw score ap grades are interpreted as follows 5 extremely well qualified 4 well qualified 3 qualified 2 possibly qualified and 1 no recommendation scores that receive college credit and or advanced placement most colleges grant students who earn at least a 3 college credit and or advanced placement you should check with your school guidance office about specific college requirements studying for your ap examination it is never too early to start studying the earlier you begin the more time you will have to sharpen your skills do not procrastinate cramming is not an effective way to study since it does not allow you the time needed to learn the test material it is very important for you to choose the time and place for studying that works best for you some students may set aside a certain number of hours every morning to study while others may choose to study at night before going to sleep other students may study during the day while waiting on a line or even while eating lunch only you can determine when and where your study time will be most effective but be consistent and use your time wisely work out a study routine and stick to it when you take the practice exams try to make your testing conditions as much like the actual test as possible turn your television and radio off and sit down at a quiet table free from distraction make sure to time yourself complete the practice tests score your tests and thoroughly review the explanations for the questions you answered incorrectly however do not review too much during any one sitting concentrate on one problem area at a time by reviewing the question and explanation and by studying our reviews until you are confident that you completely understand the material since you will be allowed to write in your test booklet during the actual exam you may want to write in the margins and spaces of this book when practicing however do not make miscellaneous notes on your answer sheet mark your answers clearly and make sure the answer you have chosen corresponds to the question you are answering keep track of your scores this will enable you to gauge your progress and discover general weaknesses in particular sections you should carefully study the reviews that cover the topics causing you difficulty as this will build your skills in those areas to get the most out of your studying time we recommend that you follow the study schedule it details how you can best budget your time test taking tips although you may be unfamiliar with tests such as the advanced placement exams there are many ways to acquaint yourself with this type of examination and help alleviate your test taking anxieties listed below are ways to help yourself become accustomed to the ap exam some of which may also be applied to other standardized tests become comfortable with the format of the ap examination in statistics when you are practicing to take the exams simulate the conditions under which you will be taking the actual tests you should practice under the same time constraints as well stay calm and pace yourself after simulating the test only a couple of times you will boost your chances of doing well and

you will be able to sit down for the actual test much more confidently know the directions and format for each section of the exam familiarizing yourself with the directions and format of the different test sections will not only save you time but will also ensure that you are familiar enough with the ap exam to avoid anxiety and the mistakes caused by being anxious work on the easier questions first if you find yourself working too long on one question make a mark next to it in your test booklet and continue after you have answered all of the questions that you can go back to the ones you have skipped use the process of elimination when you are unsure of an answer if you can eliminate three of the answer choices you have given yourself a fifty fifty chance of getting the item correct since there will only be two choices left from which to make a guess if you cannot eliminate at least three of the answer choices you may choose not to guess as you will be penalized one quarter of a point for every incorrect answer questions not answered will not be counted be sure that you are marking your answer in the oval that corresponds with the correct item in the test booklet since the multiple choice section is graded by machine marking the wrong answer will throw off your score
